

Volvo 850 Blower Motor Resistor Ecc How To

Volvo 850 Blower Motor Resistor Ecc How To - The blower in the cabin of the car will not stop blowing even when the key is out of the ignition. It ran down my battery a time or two even. Ok have a weird one here, 93 Volvo 850 Glt with the Ecc heating. Blower motor works part of the time, replaced blower motor resistor already, blower motor has power and ground. Again blower was running great, but only for 5min or so. I could still feel some warm air coming through, but barely noticeable. After giving the blower a break for 30min or so, it was running again, but not at 100% (while set to max), and again would stop blowing altogether after a few minutes.
